

The global leader in personal and organizational transformation

Innovations Visionary Leadership Series:

Guidance Support Wisdom

**FuturePerfect Leadership–Driven
by Quantum-Thinking**

In the present, chaotically changing business environment, **Innovations** has created the next generation leadership program. It clarifies the essential framework for leadership and management, particularly during turbulent times: **Guidance, Support, and Wisdom**.

Guidance reaffirms the vision, direction, and overall plan for achieving the next plateau for organizational development within the evolving paradigm of Technology Integration. Guidance involves defining the model of the futureperfect organization as well the three-step process resulting in *leading from the future*. Two crucial competencies necessary to execute this process are a *creative-adaptive mind-set* and *quantum-thinking*.

Support establishes the organizational framework in terms of the integrated principles of Empowerment, Engagement, and Virtual/Hybrid initiatives, as well as the practical implementation of these principles of operation—in terms of the competencies, roles, and responsibilities of management and the workforce. Critical to achieving this mode of competency and execution are *human equality* and the next cultural paradigm: **Compatibility**, which evolves from **Inclusion**. The basic nature of compatibility, in practice, is establishing a culture of “Unlimited Possibilities!”

Wisdom ensures oversight and management of the implementation process for predictable and unpredictable situations which occur whenever a new, daring initiative is implemented. It is *a way of being*, beyond information and knowledge. Wisdom includes both *people* and *processes* in terms of oversight. Where people are concerned, it is an in-depth understanding, empathy, and compassion for the human experience; and processes involves technology integration like hybrid learning. In this paradigm, people and process are inseparable. A crucial skill for oversight and management at this level is sleep-state creativity, wisdom, and consciousness exploration.
